

COVID-19: SANITIZING – DO NOT FLUSH DISINFECTANT WIPES

As recommended by health, sanitizing is a key component to reducing the spread of COVID-19 (Corona Virus). There are a variety of techniques that can be used to sanitize, that can suit your needs, such as: hand sanitizer, disinfectant solutions, disinfectant wipes, etc. Although the wipes are beneficial, convenient and may be your only option; it is VERY IMPORTANT that used/unwanted **WIPES ARE PLACED** in the **TRASH/GARBAGE** and **NOT FLUSHED DOWN TOILETS**.

CAUTION: Flushing of wipes may impede the flow of sewer waste and may create additional issues for your immediate household and our community as a whole.

Homemade Hand Sanitizer: The following recipe for homemade hand sanitizer may be alternative to purchasing hand sanitizer: $\frac{3}{4}$ Cup Rubbing Alcohol, $\frac{1}{4}$ Cup Aloe Vera Gel, $\frac{1}{4}$ Cup Glycerin. Mix together and store in a safe container. Makes $1\frac{1}{4}$ Cups.
